DOW CORNING® 784 Glazing Silicone Sealant

FEATURES
- Fungus and mildew resistant
- Good elasticity
- 100% silicone
- Solvent-free
- Conforms to ISO 11600-G-20LM
- Resistant to ozone, ultra-violet radiation and temperature extremes

High modulus acetoxy silicone sealant

APPLICATIONS
- DOW CORNING 784 Glazing Silicone Sealant is a one-part, silicone sealant. It has good adhesion to glass, aluminum and other non-porous construction substrates. It is ideal for use as a weather-sealant in areas that may be subject to high humidity, such as windows in bathrooms and kitchens where mold growth can occur, as it contains a fungicide to prevent mold growth.

TYPICAL PROPERTIES
Specification writers: These values are not intended for use in preparing specifications. Please contact your local Dow Corning sales representative prior to writing specifications on this product.

   - DIN: Deutsche Industrie Norm.
**TECHNICAL SPECIFICATIONS AND STANDARDS**
Conforms to ISO 11600-G-20LM. Performance related to mildew and fungus resistance has been tested in accordance with the ISO-Norm 846.

**HOW TO USE**

**Surface preparation**
Ensure that surfaces to be sealed are clean, dry, sound and free from frost, release agents, old sealants and other contaminants which could impair adhesion. All surfaces should be cleaned and degreased by wiping with a suitable solvent such as DOW CORNING® R40 Universal Cleaner on a clean oil- and lint-free cloth before application of sealant.

Note: When using any solvent, always provide adequate ventilation.
Avoid heat, sparks and open flames.
Use solvent resistant gloves. Observe and follow all precautions listed on solvent container label.

**Masking**
Areas adjacent to the joints should be masked with tape to prevent contamination of the substrates and to ensure a neat sealant line. Masking tape should be removed immediately after tooling.

**Priming**
DOW CORNING 784 Silicone Sealant offers good adhesion to most non-porous substrates found in glazing applications. However, due to the wide variety of coatings available, we recommend that substrates be tested for adhesion prior to use. The use of a primer will maximize adhesion of the sealant particularly where cleaning is a problem, for example, mill finished aluminum. For specific advice, please refer to the DOW CORNING® Brand Primers' Guide or contact one of Dow Corning’s Regional Service Centers for technical assistance.

**Back-up materials**
When back-up material is required, a closed cell polyethylene backer rod is recommended. Low tack polyethylene tape should be used in joints too shallow to allow the use of a backer rod. Back-up materials provide back pressure and prevent three sided adhesion that limits sealant movement capability.

**Finishing**
The joint should be tooled within 5 minutes of application to ensure good contact between the sealant and the substrate. Tooling of the sealant also gives a smooth, professional finish. Spatulas for tooling purposes are available from Dow Corning.

**Clean-up**
Excess sealant may be cleaned off tools and non-porous surfaces whilst in an uncured state using DOW CORNING R40 Universal Cleaner. If sealant is misapplied to porous substrates, it should be left until it is just cured and then removed by peeling, cutting or other mechanical means. Care should be taken not to damage plastic or coated surfaces.

**JOINT DESIGN**
The sealant joint width should be designed to accommodate the movement capability of the sealant. When designing joints using DOW CORNING 784 Silicone Sealant, the minimum width should be 6mm. For joints between 6-12mm wide, a seal depth of 6mm is required. For joints above 12mm wide, a width to depth ratio of 2:1 should be used. In situations where fillet joints are needed, a minimum of 6mm sealant bite to each substrate is recommended.

**HANDLING PRECAUTIONS**
Product safety information required for safe use is not included.
Before handling, read product and safety data sheets and container labels for safe use, physical and health hazard information. The material safety data sheet is available on the Dow Corning website at www.dowcorning.com.
You can also obtain a copy from your local Dow Corning sales representative or Distributor or by calling your local Dow Corning Global Connection.

**USABLE LIFE AND STORAGE**
When stored in cool, dry conditions below 30°C (86°F) in the original unopened containers, DOW CORNING 784 Silicone Sealant has a usable life of 27 months from the date of production.

**PACKAGING**
DOW CORNING 784 Silicone Sealant is supplied in 310ml cartridges packed in boxes of 12.
LIMITATIONS
DOW CORNING 784 Silicone Sealant is not recommended for use on porous substrates such as concrete, stone, marble or granite. DOW CORNING 784 Silicone Sealant should not be used in contact with the edge seal of an insulated glazed unit.

DOW CORNING 784 Silicone Sealant is not recommended for use with certain plastics, for example, PVC-U where high thermal movement may occur.

Do not use DOW CORNING 784 Silicone Sealant on bituminous substrates, substrates based on natural rubber, chloroprene or EPDM or on building materials which might bleed oils, plasticisers or solvents. Do not use DOW CORNING 784 Silicone Sealant in a totally confined space because the sealant requires atmospheric moisture to cure. Because acetic acid is released during curing, it can corrode mirror silver and sensitive metals such as copper, brass and lead.

DOW CORNING\textsuperscript{a} 817 Mirror Adhesive should be used for this application. DOW CORNING 784 Silicone Sealant is not recommended for use on submerged joints or in joints where physical abuse or abrasion is likely to occur.

DOW CORNING 784 Silicone Sealant must not be used for construction or repair of aquarium systems. DOW CORNING\textsuperscript{a} 788 Aquaria Sealant should be used for this application.

DOW CORNING 784 Silicone Sealant should not be used in conjunction with laminated glass.

DOW CORNING 784 Silicone Sealant is not recommended for structural glazing or insulated glazing applications.

This product is neither tested nor represented as suitable for medical or pharmaceutical uses.

HEALTH AND ENVIRONMENTAL INFORMATION
To support Customers in their product safety needs, Dow Corning has an extensive Product Stewardship organization and a team of Product Safety and Regulatory Compliance (PS&RC) specialists available in each area.

For further information, please see our website, www.dowcorning.com or consult your local Dow Corning representative.

LIMITED WARRANTY INFORMATION - PLEASE READ CAREFULLY
The information contained herein is offered in good faith and is believed to be accurate. However, because conditions and methods of use of our products are beyond our control, this information should not be used in substitution for customers' tests to ensure that Dow Corning's products are safe, effective, and fully satisfactory for the intended end use. Suggestions of use shall not be taken as inducements to infringe any patent.

Dow Corning's sole warranty is that the product will meet the Dow Corning sales specifications in effect at the time of shipment.

Your exclusive remedy for breach of such warranty is limited to refund of purchase price or replacement of any product shown to be other than as warranted.

DOW CORNING SPECIFICALLY DISCLAIMS ANY OTHER EXPRESS OR IMPLIED WARRANTY OF FITNESS FOR A PARTICULAR PURPOSE OR MERCHANTABILITY.

DOW CORNING DISCLAIMS LIABILITY FOR ANY INCIDENTAL OR CONSEQUENTIAL DAMAGES.
